# Bianca di Saluzzo

Sp. Gallus gallus domesticus

Breed data sheet: origin and morphological, genetic, reproductive, and productive traits

#### **Breed origin and development**

Name of the breed	Bianca di Saluzzo				
Synonyms or local names	Bianca di Cavour				
Geographic origin	Piedmont, Marquisate of Saluzzo (Saluzzo and neighbouring villages)				
Geographic distribution	Piedmont				
Estimated total population size	874 (Castillo et al., 2021)				
Extinction risk status (FAO, 1998)	Threatened conserved				
Any other specific information	Medium-sized breed				

#### Historical origin

News of this breed have been recorded since XIX century, when it was already known for the deliciousness of the meat and for the small size. It was widely distributed in the area of the ancient Marquisate of Saluzzo, in the surroundings of Turin. The town of Cavour, once home of an important poultry market, has especially safeguarded the presence of this breed in local farms, so much that Bianca di Saluzzo breed is sometimes referred to as Bianca di Cavour.

In the 1800s, local farms could sell about half the reared chickens. Hens were reared for family sustenance, in addition to provide eggs and meat to be sold at local markets, in order to buy food that the farm could not produce, such as coffee, sugar, salt and oil.

Up to the half of the last century, Piedmont traditional breeds were quite famous, attracting merchants to local fairs from all over Italy.

Around 1960, due to industrialisation and intensive agriculture, breeders decreased that reared Bianca di Saluzzo, that was replaced by fast growing breeds, with unsavoury meat and not suitable for rural free-range breeding.

Bianca di Saluzzo breed recovery started in 1999, when Slow Food proposed to safeguard and promote endangered products endowed with exquisite organoleptic qualities. The selection and diffusion of this breed has thus begun, starting from residual animals found in the countryside (www.prodottitipici.provincia.cuneo.it).

Bianca di Saluzzo has been a Slow Food presidium since 1999, when the Professional

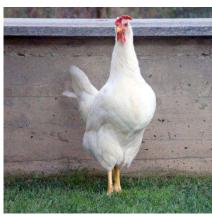

Institute for Agriculture and Environment of Verzuolo started a careful selection and recovery activity of this slow growing breed, that was close to extinction.

Since 2014, the University of Turin has started a program of conservation and genetic improvement.

# Mortality

Age (weeks)	A	verage (%)
Age (weeks)	Male	Female
0-1	0.1	0.1
1-8	0.05	0.05
8-20	0.01	0.01
20-34	0.01	0.01

# Slaughter data

	Average		
Slaughter parameters	Males	Females	
	(6 months)	(7 months)	
Live weight (kg)	2.3	1.9	
Carcass weight (eviscerated) (kg)	1.3	1	
Carcass weight (eviscerated) yeald (%)	59.4	54.2	

# **Rearing traits**

Breed type	Rustic, rural, lively		
Growth speed (precocious vs tardive)	Tardive		
Feathering speed (precocious vs tardive)	Precocious		
Broodiness	Low		
Parental care attitude	Low		
Ease of breeding	Easy		
Male:female ratio for breeding	1:10		
Tolerance or resistance to diseases and parasites	Good		
Tolerance to extremes of temperature	Good		
Reported uses (meat, eggs)	Primary: meat		
	Secondary: eggs		

# Qualitative and quantitative morphological traits in adult breeders

### Discrete or qualitative traits

Normal			
Normal			
Thick and well adherent to the body, abundant cape			
White, with pearl/gold platinum lustre			
Single-colour, without sexual dimorphism			
Yellow			
Simple comb, red, upright in the male, in the female the			
rear part falls to one side			
Four to seven spikes			
White-yellow (red is tolerated); well-developed in the			
male			
Yellow			
Orange			
Absent			
Absent			
Absent			
Yellow			
Yellow			
Free from feathers			
-			
Red, well-developed wattles			
·			

Colour pattern
Uniform white all over the body, the cape can show pearl/gold platinum lustre in the male.

### **Quantitative traits**

Parameters	Ma	ile	Female		
Parameters	Average±SD* Min-max		Average±SD*	Min-max	
Body weight (g)	2823±227	2504-3210	1964±154	1403-2362	
Body length (cm)	45,4±1,3	43-47	36,8±1,6	35-40	
Chest circumference (cm)	37,2±2,1	34-42	30,8±2,2	26-33	
Shank length (cm)	9±0,4	8,5-49,5	7,6±0,3	7-8	
Shank diameter (cm)	1,1±0,1	1,0-1,2	0,8±0,1	0,7-0,9	
Wing span (cm)	45,3±3,2	42-51	35,5±1,2	33-37

### **Genetic traits**

# Characterisation of the breed with Single Nucleotide Polymorphisms (SNPs)

Molecular marker	Affymetrix Axiom 600K Chicken Genotyping Array
Laboratory that performed the	Department of Agronomy, Food, Natural Resources,
analyses	Animals and Environment (DAFNAE)
	University of Padua
Analysed parameters	MAF: minor allelic frequency
	Ho: observed heterozygosis
	He: expected heterozygosis
	F <sub>HOM</sub> : inbreeding coefficient

Year		N**	MAF	Но	He	F <sub>ном</sub>
2019 Mean		24	0.286	0.339	0.336	0.076
	SD*		0.190	0.172	0.151	0.059

<sup>\*</sup>SD: standard deviation; \*\*N: number of samples

# Characterisation of nucleus populations with microsatellites and mating plans

Molecular marker	Microsatellites (26 markers)				
Laboratory that performed the	Laboratory of Animal Molecular Genetics				
analyses	Department of Veterinary Science (DSV)				
	University of Turin				
Analysed parameters	Ne: effective number of alleles				
	Na: observed number of alleles				
	I: Shannon diversity index				
	H-Ind: individual variability index				
	Ho: observed heterozygosis (average H-Ind)				
	He: expected heterozygosis				
	F: fixation index				
	P: average kinship index				
Indexes used to schedule mating	H-Ind				
plans	Р				

Year		N**	Na	Ne	ı	Но	He	F	Р
2020	Mean	59	6.714	3.563	1.388	0.687	0.676	-0.026	0.46
	SE*		0.624	0.414	0.104	0.031	0.031	0.034	
2022	Mean	34	2.38	3.02	0.89	0.63	0.52	-0.22	0.50
	SE*		0.08	0.10	0.03	0.02	0.02	0.02	0.01

<sup>\*</sup>SE: standard error; \*\*N: number of samples

# Reproductive and productive quantitative traits

#### Oviposition, brooding and incubation data

Age at sexual maturity of hens (weeks)	24-28
Length of first oviposition cycle (weeks)	45
Annual egg production per hen (min-max)*	115-150
Average clutch size (min-max)	N.a.**
Clutch interval (days)	N.a.**
Incubation length (days)	21

<sup>\*</sup>As measured during the first year of age, min-max of family line

#### **Egg-quality traits**

Parameters	First oviposition cycle*		Second oviposition cycle**	
	Average	Min-max	Average	Min-max
Egg weight (g)	53.4	39.5-67.4	56.7	43.6-69.8
Shell colour	Cream-pink			

<sup>\*</sup> Total n. of measured eggs: 12610; \*\* Total n. of measured eggs: 5303

Parameters (sample measurement)	Average	Min-max
Egg weight (g)	60.2	52.6-68.4
Shell weight (g)	7.3	5.9-8.8
Albumen weight (g)	34.5	29.7-40.0
Yolk weight (g)	17.7	15.3-20.3
Egg Shape Index*	75.1	70.8-78.6

<sup>\*</sup> Egg Shape Index (ESI) = short diameter/long diameter x 100

# Body weight and growth data

Age (weeks)	Male weight (g)		Female weight (g)	
	Average	SD*	Average	SD*
0 (hatching)	39.85	2.70	38178	3.35
